

Angel Andres Hernandez Serna

Saltillo, COA

(449) 142 5727

andres.hdzserna@gmail.com

Experiencia profesional

- **General Supervisor Preventive Maintenance & Continuous Improvement en ABC Autolineas**

marzo 2026 - Actual

Responsible for preventive maintenance planning, workshop operation control, KPI monitoring, backlog management, fleet availability, and continuous improvement initiatives for heavy-duty trucks and trailers. Experienced in process optimization, maintenance tracking systems, dashboard development, workflow standardization, and operational performance analysis. Focused on increasing fleet reliability, reducing downtime, and improving maintenance efficiency through data-driven decision-making and Lean methodologies.

- **Industrial engineer en Flor de Calvillo**

noviembre 2025 - marzo 2026

Led the implementation and partial automation of a guava candy production line, including equipment selection, installation, and process setup. Developed process flows, work instructions, quality controls, and preventive maintenance plans. The project improved production efficiency and reduced manual labor requirements by approximately 15 operators while maintaining product quality and operational stability.

- **Industrial Engineer Staff Senior en Jatco Mexico**

diciembre 2022 - noviembre 2025

Leadership in solving complex problems related to line efficiency and direct labor cost. Implementation and optimization of industrial engineering methodologies with a focus on waste reduction and productivity improvement. Coordination of strategic continuous improvement projects at a global level within Jatco. Identification of improvement opportunities in equipment and processes by analyzing OEE and its losses. Training and development of personnel in industrial engineering tools to strengthen the culture of continuous improvement.

- **Quality Internship en Jatco Mexico**

julio 2022 - noviembre 2022

During my internship in the Quality Department, I designed and developed a comprehensive database system using VBA to track and manage calibrator records. The tool improved monitoring accuracy and efficiency by enabling detailed data input, real-time updates, and historical tracking, while also generating automated reports and alerts to ensure compliance with calibration schedules, enhancing traceability and reducing human error.

- **Process Engineer Staff (Virtual) en Serna's Trucking**

septiembre 2021 - diciembre 2021

During my time at Sernas Trucking, I developed and implemented digital inventory control systems, designed tools for stock tracking and resource optimization, and created HOE diagrams and flowcharts to improve operational processes. I also supported cross-department communication through translation of technical

documentation and applied Lean tools to enhance logistics efficiency and accuracy.

- **Internship en Université de Lille**

enero 2021 - julio 2021

During my academic exchange at the Université de Technologie de Lille in France, I created a mechanical load simulator designed to support students in the demonstration of load behavior across different machines. The simulator provided a practical learning tool to visualize how varying loads impact machine performance, improving the understanding of mechanical concepts in a hands-on way. This project allowed me to integrate theoretical knowledge with practical application, while also enhancing my skills in technical design, problem-solving, and collaboration within an international academic environment.

Objetivo profesional

Puesto: Staff

Salario mensual deseado: \$35,000

I'm Angel, an Industrial Engineer with hands-on experience in manufacturing environments, focused on optimizing processes, improving efficiency, and reducing operational waste. I am passionate about continuous learning and applying both engineering and digital tools to solve real-world problems.

Área de especialidad

Ingeniería industrial, Ingeniería de procesos, Automatización

Habilidades

office avanzado, lean manufacturing, instalación de líneas de producción, ergonomía, overall equipment effectiveness, github, javascript, html css3, kaizen mejora continua, toma de tiempos y movimientos

Educación

- **EBAC**

2024 - Actual

Diplomado en Full Stack Dev. Python

- **Universidad Tecnológica de Aguascalientes**

2021 - 2023

Universitario - Titulado en Sistemas Productivos

- **Universidad de Lille**

2020 - 2021

Diplomado en Automatizacion y Calidad

- **Universidad Tecnológica de Aguascalientes**

2018 - 2020

Universitario - Titulado en Procesos Industriales Área Manufactura

Idiomas

Español Lengua nativa, Inglés Avanzado, Francés Avanzado, Alemán Básico
